AMERITUS ENTRAL™ FEEDING TUBES

FOR ENTERAL FEEDING

ASSURE PATIENT SAFETY

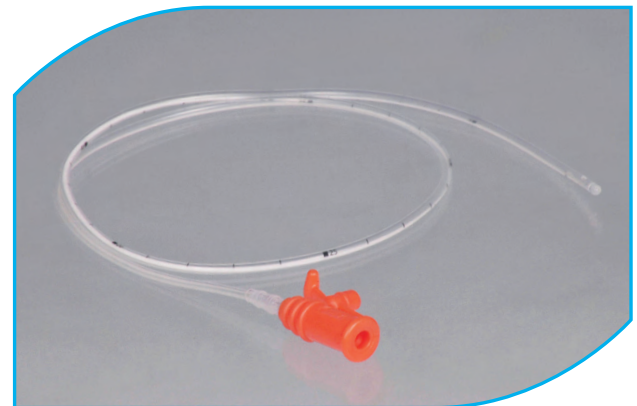

Features

The Ameritus ENTRAL™ Feeding Tubes have been designed to provide optimum patient safety while improving the standard of care and ease of use for the clinicians

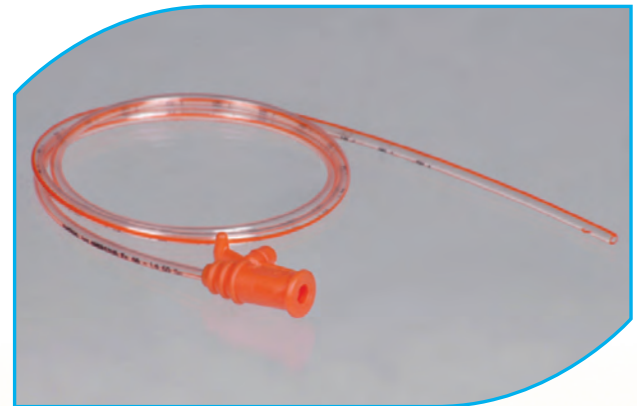

- The connection on the feeding tube is specifically designed to help prevent dangerous misconnections to IV lines and Luer Syringes. The oral hub is compatible with standard oral tip syringes and enteral only extension sets with universal male connectors (Please refer to the complete Ameritus enteral line of oral syringes and extension sets)
- Orange color coding provides easy visual recognition of the enteral connection
- Radiopaque stripe for X-ray visualization to confirm proper feeding tube placement
- Ergonomic and smooth ridges on the lower section of the connector enhance grip for effective connection and disconnection of the feeding tube
- French size and length clearly printed on the feeding tube as well as centimeter markings (approx.) to assist tube placement or check for migration
- Lot number also printed on the feeding tube for tracking purposes
- Smooth open rounded tip and large lateral hole on distal end of tube
- Tethered plug for connector closure to prevent air and fluid ingress when not in use
- Sterile, single packed
- All materials are Latex Free and DEHP Free
